Features

- Forward current: $\leq 240\text{mA}$
- Typical view angle 50% Iv: 120°
- RoHS2.0 and REACH-compliant
- Lens color: yellowish
- Qualified according to JEDEC moisturevity Level 2a
- ESD level 6 kV(HBM)
- Reliability Test: AEC Q-102qualified

Applications

- Indoor signage display applications
- Indoor decorating and entertainment design
- Flat backlight for LCD. Switch and symbol
- Automotive electronics
- Special applications

■ Relative Spectral Power Distribution

The maximum forward current is determined by the thermal resistance between the LED junction and solder point. It is crucial for the end product to be designed in a manner that minimizes the thermal resistance from the solder point to ambient in order to optimize lamp life and optical characteristics.

■ Dimensions

Ramp-down Rate (TP to 100 °C)	-	-	3	4	K/s
Time 25 °C to TP	-	-	-	480	s

Notes:

1. Do not stress the silicone resin while it is exposed to high temperature.
2. The reflow process should not exceed 3 times.

■ **Test Circuit and Handling Precautions**

1. Test Circuit

2. Handling Precautions

2.1. Over-current-proof

Customer must apply resistors for protection; otherwise slight voltage shift will cause big current change (Burn out will happen).

2.2. Storage

1). It is recommended to store the products in the following conditions:

Humidity: 60% R.H. Max.

Temperature: 5°C~30°C (41°F~86°F)

2). Shelf life in sealed bag: 12 month at < 5°C~30°C and < 60% R.H. after the package is Opened, the products should be used within four weeks or they should be keeping to stored at ≤20%R.H. with zip-lock sealed.

2.3. Baking

If the package has been opened for more than 4 weeks, it is recommended to bake the products with the following instruction:

1). 60±3°C X 6hrs and < 5%RH, for reel

2). 125±3°C X 2hrs, for single LED

It shall be normal to see slight color fading of carrier (light yellow) after baking in process

■ Packing

● Dimensions of Reel (Unit: mm)

Note: 01.The tolerance unless mentioned is ± 0.1 mm.
02.The measured unit is "mm".

● Dimensions of Tape (Unit: mm)

● Arrangement of Tape

Notes:

1. Empty component pockets are sealed with top cover tape
2. The max loss number of SMD is 2pcs
3. The cathode is oriented towards the tape sprocket hole in accordance with ANSI/EIA RS-481 specifications
4. 1,000pcs per reel
5. The remainder packing in multiples of 500pcs.

■ Packing

● Packaging Specifications

Notes:

Reeled product (max.1,000) is packed in a sealed moisture-proof bag. Five bags are packed in an inner box (size: about 260 X 230 X 100 mm) and four inner boxes are in an outer box (size: about 480 X 275 X 215 mm). On the label of moisture-proof bag, there should be the information of Part No., Lot No. and quantity number; also the total quantity number should be on inspection request form on outer box.

■ **Precautions**

1. Abnormal situation caused by improper setting of collet

To choose the right collet is the key issue in improving the product's quality. LED is different from other electronic components, which is not only about electrical output but also for optical output. This characteristic made LED more fragile in the process of SMT. If the collet's lowering down height is not well set, it will bring damage to the gold wire at the time of collet's picking up and loading which will cause the LED fail to light up, light up now and then or other quality problems

2. How to choose the collet

During SMT, please choose the collet that has larger outer diameter than the lighting area of lens, in case that improper position of collet will damage the gold wire inside the LED. Different collets fit for different products, please refer to the following pictures cross out

Outer diameter of collet should be larger than the lighting area

Picture 1(√)

Picture 2(X)

3. Other points for attention

- A. No pressure should be exerted to the epoxy shell of the SMD under high temperature.
- B. Do not scratch or wipe the lens since the lens and gold wire inside are rather fragile and cross out easy to break.
- C. LED should be used as soon as possible when being taken out of the original package, and should be stored in anti-moisture and anti-ESD package.

4. This usage and handling instruction is only for your reference.
